Education

University of British Columbia - Vancouver, BC Canada

BSc Computer Science

September 2019 -> Current

Currently studying computer science at UBC. Teaching assistant for several computer science courses. Member of UBC Launchpad, software engineering design club. Expected graduation in May 2024.

Experience

Software Engineer Intern @ Microsoft - Redmond, WA USA

May 2022 -> August 2022

Interned on the Azure Data team. Designed and built a scalable and performant data discovery back-end microservice that runs jobs with an SLA of 30 seconds using a serverless architecture with Azure Functions and C#.

Software Engineer Intern @ Figma - San Francisco, CA USA

January 2022 -> May 2022

Interned on the Design Systems team. Implemented a new full-stack feature to improve the library updates flow in Figma, working closely with designers and engineers and using C++, Web Assembly, Typescript, and React. Optimized for high performance in creating complex user interactions.

Software Developer Intern @ Thrive Health - Vancouver, BC Canada

January 2021 -> August 2021

Interned on the Public Health and Enterprise teams. Implemented several new full-stack features in Typescript, React, Node, and PostgreSQL including:

- > contributing new React components to the front-end component library
- > performance tuning client side fetching for appointments, fetching data incrementally instead of fully loading all data in one request
- > performance tuning SQL queries for new features to the Canadian COVID app

Teaching Assistant @ UBC - Vancouver, BC Canada

January 2021 -> December 2021

Teaching assistant for CPSC 213, Introduction to Systems, and CPSC 210, Software Construction. Assisted students with assignments, hosted office hours and labs, and graded midterms and finals. Developed syntax highlighter extensions for our course's proprietary assembly language for both VS Code and the Ace editor.

Technical Projects

Launch Pad Interview Scheduler

September 2021 -> May 2022

Worked on a software engineering design club of 11 people to build an interview scheduler web application using Typescript, Node, Firebase, PostgreSQL, and React. Designed solutions carefully, considering edge cases and scalability. Led back-end development architecture and implemented a responsive front-end adhering to designs made in Figma.

Programming Languages

- > Typescript/ Javascript
- > C && C++
- > C#
- > Java
- > Python
- > Racket
- > Lua
- > HTML && CSS

Tools/ Frameworks

- > Node
- > React
- > Redux
- > SQL
- > WebAssembly
- > .NET
- > Azure && Azure functions
- > Figma
- > Git
- > Agile
- > Object-oriented programming
- > Design patterns
- > Unit/ E2E testing
